

How do I...

find variables from similar life stage across different studies?

- a.k.a. cross-study cross-sectional data
- e.g. “asthma in early childhood across all studies”

### Results

asthma   Sort by: Relevance

Item types: Variables  
Query: asthma  
Search life stages: Childhood, Early years  
Results 1 to 20 of 101 (0.015 seconds)

**Variable name**

**Variable label**

**Study**

**Study sweep**

**Source dataset**

**ASTMD3**  
Asthma  
Has this child, during the last year, had an attack of asthma?  
Study: National Survey of Health and Development / Sweep: 1957 (aged 11 years) / Data File: 1957 Examination by the School Doctor Dataset

**DRCND2**  
Treatment - asthma  
Has a doctor been consulted about his asthma?  
Study: National Survey of Health and Development / Sweep: 1953 (aged 7 years) / Data File: 1953 School Doctor Dataset

**INVD3**  
Asthma - investigations  
Study: National Survey of Health and Development / Sweep: 1957 (aged 11 years) / Data File: 1957 Examination by the School Doctor Dataset

**INVD2**  
Investigations - asthma  
Study: National Survey of Health and Development / Sweep: 1953 (aged 7 years) / Data File: 1953 School Doctor Dataset

**E113A**  
Siblings - Asthma  
Study: 1970 British Cohort Study / Sweep: Age 5 Survey (1975) / Data File: BCS70 Home Interview (1975) Dataset
